Xeditor Release 4.0

Munich (Germany)/Seattle (USA), May 11, 2017 – The new Xeditor release 4.0 features a unique structured change tracking, an optimized user experience and a completely new look.

Structured and multi-user change tracking, offline mode

With this new feature structural changes are tracked in addition to content changes. This means that Xeditor knows when and where elements were moved, added, or deleted, so that users never lose any important version history. Xeditor has also color coordinated all user changes and added in-context Accept/Reject buttons - making it even easier to collaborate across teams.

Track changes also works in offline mode, saving them locally until a connection is re-established.

Intuitive user guidance and experience through Flat Design

With the new minimalist and transparent flat design, the Xeditor user interface and user experience have been fundamentally improved and the loading and response times optimized. Simpler menu navigation and a new toolbar lead the user efficiently to its desired result. In addition, the revised context menu provides an element search to help users find items more quickly.

With the new release, Xeditor was updated to ExtJS version 6.2.1 and a Google Drive connection plug-in was integrated.

Xeditor, the web-based WYSIWYG editor, allows authors to create and edit XML documents intuitively without any technical knowledge. Xeditor effortlessly integrates into other pre-existing systems (CMS, PIM, etc.) and is fully customizable and extendable. Xeditor supports DITA, TEI, JATS, DocBook, S100D and other technical standards.

Target Group

- Publishers and media houses
- Technical documentation
- Corporate Publishing
- Universities, educational institutions, mail order industry, etc.
